

# PROFESSIONAL PEEL - Pigment Correct Peel

## Treatment Description

Introducing the breakthrough solution to correct all types of visible hyperpigmentation-across all Fitzpatrick's. With Multi-Acid Synergistic Technology (MAST). It corrects and prevents visible hyperpigmentation, \* including: sun damage, melasma, and post-inflammatory hyperpigmentation (PIH). \* When used in combination with daily SPF. And is a zero-downtime treatment with results in 7 days.

## When?

Pigment Correct Peel can be performed at 3-4 week intervals.

## Who is it for?

All clients, excluding contraindicated patients. A great entry level peel choice for all Fitzpatrick's and those looking to fight a range

of pigment concerns.

## Key Ingredients

**LIFT:** Lactic (16%), Mandelic (8%), Pyruvic (4%) Acids

Exfoliates and lifts existing visible hyperpigmentation while inhibiting melanin production.

**PREVENT:** Tranexamic Acid (TXA) (1%)

An effective tyrosinase inhibitor that prevents formation of new visible hyperpigmentation. Slows the production of melanin by inhibiting a pathway known as the plasminogen/plasmin pathway.

**CALM:** Milk Thistle Extract

A calming anti-inflammatory botanical extract that supports skin barrier by reducing skin inflammation which is the precursor to all visible hyperpigmentation.

## Pigment Correct Peel Protocol

### Cleanse

1. Facial Wash Oily/Problem - Cleanse the area of treatment thoroughly. Rinse and pat dry.

### Tone

2. Hydrating Toner - Apply with a cotton pad to prep (degrease) the skin. Allow the skin to dry.. Assess sensitivity by asking the patient, "On a scale of one to ten, ten being extremely active, how do you rate this sensation (or feeling)?"

### Treat

3. Part 1 - Pore Refining Treatment - Dispense a 10p size amount, applying all over the face but avoiding application too close to the eye and lip area. Work in gentle circular motions then rinse and pat dry. PRO TIP- To make the treatment more bespoke for the patient choose the appropriate PCA Skin® Therapeutic Mask for your patient's skin or even multi mask.

Part 2 - Pigment Correct Peel - Gently agitate the product and apply four to five dots to a cotton pad, placing the neck of the bottle directly onto the pad, spacing it to give a sufficient working area to complete a full-face treatment (about four to five spots on the pad). This product may sting or tingle on some individuals. Assess patients sensitivity scale. If higher than a 6, do not apply a second layer. You can use a fan in between applications to dry the peel and cool the patient's skin. PCA Skin® peels are self neutralising and do not need timing or removing.

### Hydrate & Protect

6. Apply a pea sized amount of ReBalance and Hydrator Plus Broad-Spectrum SPF product - Complete the treatment with this combination to calm, hydrate and protect the skin from UVA and UVB exposure.

## Indications:

Fitzpatrick types I-VI  
Hyperpigmentation  
Uneven skin tone  
Melasma  
Uv induced  
hyperpigmentation/sun  
spots/sun damage  
PIH  
Post Inflammatory Erythema

## Contraindications:

Pregnancy/Lactation  
Active cold sore  
Aggravated skin  
Roaccutane  
Psoriasis  
Ingredient allergy

## Contains no:

Parabens  
Synthetic dyes  
Synthetic fragrances  
Mineral oil  
Petrochemicals  
Petroleum  
Lanolin

## No animal testing

Maximum Layers: 1-4
